UNIVERSITI TEKNOLOGI MALAYSIA
FINAL EXAMINATION SEMESTER 2, 2023/2024

SUBJECT CODE	**:**	**SECI1143**
SUBJECT NAME	**:**	**PROBABILITY & STATISTICAL DATA ANALYSIS**
SECTION	**:**	**01 - 12**
TIME	**:**	
DATE/DAY	**:**	
VENUES	**:**	

INSTRUCTIONS:

i. Answer **ALL** questions in the given **ANSWER BOOKLET**.
ii. This paper consists of **SIX (6) QUESTIONS:**
iii. **DO ALL CALCULATION IN 3 DECIMAL POINTS.**
iv. Submit **BOTH Questions and Answer Booklet** at the end of the exam.

(Please Write Your Lecturer Name and Section in Your Answer Booklet)

Name	
I/C No.	
Year / Course	
Section	
Lecturer Name	

This question paper consists of **EIGHT (8)** printed pages including this page.

STRUCTURED QUESTIONS (100 MARKS)

INSTRUCTION:

This section consists of **SIX (6)** questions. Answer **ALL** questions in the answer booklet.

QUESTION 1 **[10 MARKS]**

a) A study in agriculture industry is conducted to estimate the average yield of wheat per acre in the farms. The study wants to determine the population mean yield and construct a confidence interval to provide a range within which the true population mean lies. Hence, 15 wheat fields are selected randomly from the farms and record the yields (in KG per acre). The data are as in **Table 1**:

Table 1: Data on yield of wheat per acre in the farms

Wheat fields	**1**	**2**	**3**	**4**	**5**
Yields (KG / acre)	50	55	48	52	49
Wheat fields	**6**	**7**	**8**	**9**	**10**
Yields (KG / acre)	56	53	47	51	50
Wheat fields	**11**	**12**	**13**	**14**	**15**
Yields (KG / acre)	54	52	48	50	55

i) Calculate a point estimate of the population mean, μ.

(2 Marks)

ii) Construct and interpret a 90% confidence interval for μ.

(5 Marks)

b) A financial analyst wants to determine if a sample of stock returns comes from a population with a mean return greater than 8%. The analyst obtains a simple random sample of 60 stock returns from a particular sector. The sample mean return is 9.2%, and the population standard deviation of stock returns in this sector is known to be 3.5%. The analyst decides to test the claim using a significance level of 0.05. Interpret and proof his assumption with statistic.

(3 Marks)

QUESTION 2 **[20 MARKS]**

a) A company is interested in comparing customer satisfaction scores for two different versions of its product. They collected satisfaction ratings from two independent samples of customers who used Version A and Version B of the product. The goal is to determine if there is a significant difference in customer satisfaction between the two versions. The summary of the data is in **Table 2**:

Table 2: Data on customer satisfaction scores for two different versions product

	Number of respondents, n_i	**Mean,** $\underline{x_i}$	**Standard deviation,** s_i
Version A	50	4.2	0.8
Version B	60	4.5	0.7

i) State the hypothesis statement.

(2 Marks)

ii) Calculate the test statistic.

(2 Marks)

iii) Calculate the degree of freedom.

(2 Marks)

iv) Test at $\alpha = 0.05$ level of significance whether there is a mean difference in customer satisfaction between the two versions.

(4 Marks)

b) A group of students are evaluated to test their performance before and after a tutoring program, and the results are shown in **Table 3.**

Table 3: Data on performance before and after a tutoring program

Before tutoring	72	68	75	80	78
After tutoring	82	85	88	90	86

i) State the null and alternative hypotheses

(1 Mark)

ii) By using a significance level of $\alpha = 0.05$, does a tutoring program have a significant effect on the improvement of test scores for students?

(9 Marks)

QUESTION 3 **[20 MARKS]**

a) A restaurant manager wants to analyse whether the distribution of customer reservations is uniform across weekdays. The manager recorded the number of reservations made each day during a randomly chosen week. The data is presented in **Table 4** below:

Table 4: Data on number of reservations made each day during a randomly chosen week

Day	Monday	Tuesday	Wednesday	Thursday	Friday
Reservation	30	25	35	28	40

i) Based on this data, conduct a hypothesis test.

(1 Mark)

ii) Calculate the expected frequency and the test statistic.

(4 Marks)

iii) Find the critical value. Do the data prove that the number of reservations is equally distributed throughout the weekdays. Use significance level, $\alpha = 0.05$.

(3 Marks)

b) Internet has become the most important means of communication and gathering information. People with different age use Internet for different purposes. A random sample of 159 adults yielded the data shows in **Table 5** to find out the relationship between age and the usage of internet.

Table 5: The relationship between age and the usage of internet

		Age	
		25- 64	**65+**
Internet Usage	**Never**	38	31
	Sometimes	31	4
	Every day	50	5

i) State the null and alternative hypotheses.

(2 Marks)

ii) Calculate the expected count and the test statistic

(7 Marks)

iii) At the 1% significance level, do the data provide sufficient evidence to conclude that a relationship exists between age and Internet usage?

(3 Marks)

QUESTION 4 **[15 MARKS]**

Table 6 shows the blood pressure, p mmHG, and albumin, a, mg/gram level for 7 patients. High blood pressure may cause kidney disease or damage indicated by albumin level. An analysis must be conducted to understand the relationship between blood pressure and raised albumin levels.

Table 6: Blood pressure and albumin level

Patient	**A**	**B**	**C**	**D**	**E**	**F**	**G**
p	160	162	175	185	178	170	182
a	22	29	31	35	33	38	45

a) Draw (sketch) the scatterplot. Is there any relationship observed? If yes, determine whether the relationship is negative or positive.

(2 Marks)

b) Calculate the correlation coefficient for data in **Table 6**, given $\Sigma p^2 = 210402$ and $\Sigma a^2 = 8069$. Interpret the result.

(11 Marks)

c) Each patient in **Table 6** is given medication that lowers the blood pressure level, p, what will happen to albumin level, a, based on your findings in (b)?

(2 Marks)

QUESTION 5 **[15 MARKS]**

a) Kembara Motor Association (KMA) is analyzing the relationship between engine volume and mileage, given the same volume of petrol. **Table 7** is tabulated for liquid-cooled 4-stroke 16-valve cylinder engines from different motorbikes manufacturers. The engine volume is in total cubic km.

Table 7: Engine Volume and Mileage of different Motorbikes Manufacturer

Motorbikes manufacturer	**Engine volume, *x* *(cubic km)***	**Mileage, *y* *(km)***
A	97	24
B	88	21
C	105	24
D	151	25
E	140	22
F	134	23
G	118	22

Based on the given data,

i) Find the summation for $\boldsymbol{x}$, $\boldsymbol{y}$, $\boldsymbol{x^2}$, $\boldsymbol{y^2}$ and $\boldsymbol{xy}$ for the above data.

(5 Marks)

ii) Find the linear regression equation using the least-square method.

(4 Marks)

iii) Use the linear regression equation to estimate the mileage for a motorbike which has 120 cubic km engine volume.

(1 Mark)

b) Dr. Fatimah is monitoring 6 diabetic patients in her ward. After her morning round, she observed that her patient' blood pressure, ($p\ mmHg$) and their age ($t\ years$) as in **Table 8** below:

Table 8: Blood pressure ages of Dr. Fatimah's patients

Patient	**1**	**2**	**3**	**4**	**5**	**6**
t	35	74	48	60	42	26
p	88	130	120	135	98	80

i) Sketch a scatter diagram of the data and interpret the correlation coefficient.

(2 marks)

ii) Given the estimator of the standard error of the slope (s_{b_1}) is 0.07 and the linear regression equation for the data is $\hat{y} = 50.728 + 1.216x$, does the patient's age affect the blood pressure reading? Test the hypothesis using 95% confidence level.

(3 marks)

QUESTION 6 **[20 MARKS]**

Table 9 below examines departure delay times for AM Airline flights from Senai Johor to Kuching Sarawak. Departure delay times, measured in minutes, reflect the time difference between scheduled departure and actual departure.

The negative values denote flights departing earlier than scheduled (early take-off) and 0 means the flight departed on time (no delay). The objective of the study is to ascertain whether these departure delay times vary significantly across different flights.

Table 9: Departure delay times for AM Airline flights

Flight No	**Departure Delay Times (minutes)**								**Standard Deviation, s_i**
AB103	-2	-1	-2	2	-2	0	-2	-3	$s_1 = 1.58$
AB112	19	-4	-5	-1	-4	73	0	1	$s_2 = 26.64$
AB108	18	60	142	-1	-11	-1	47	13	$s_3 = 50.25$

Let: $\underline{x}_1$ is the mean for flight AB103.
$\underline{x}_2$ is the mean for flight AB112.
$\underline{x}_3$ is the mean for flight AB108.

a) Find:
i) $\underline{x}$ for each category.

(3 Marks)

ii) Variance between samples.

(5 Marks)

iii) Variance within samples.

(4 Marks)

b) Use a 0.05 significance level to test the claim that the different flights have the same mean departure delay time.

(8 Marks)

-END OF QUESTIONS PAPER-

List of Formula:

(a) Hypothesis Testing for one sample:

$$Test\ Statistic, z = \frac{\hat{p} - p}{\sqrt{\frac{pq}{n}}}$$

$$Test\ Statistic, t_0 = \frac{\bar{x} - \mu}{s/\sqrt{n}}$$

$$Test\ Statistic, z_0 = \frac{\bar{x} - \mu}{\sigma/\sqrt{n}}$$

$$Test\ Statistic, \chi^2 = \frac{(n-1)s^2}{\sigma^2}$$

(b) Hypothesis Testing for two samples:

$$Test\ Statistic, z = \frac{(\widehat{p_1} - \widehat{p_2}) - (p_1 - p_2)}{\sqrt{\frac{\bar{p}\bar{q}}{n_1} + \frac{\bar{p}\bar{q}}{n_2}}}$$

$$Test\ Statistic, z_0 = \frac{\bar{x}_1 - \bar{x}_2 - \Delta_0}{\sqrt{\frac{\sigma_1^2}{n_1} + \frac{\sigma_2^2}{n_2}}}$$

$$Test\ Statistic, t_0 = \frac{\bar{x}_1 - \bar{x}_2 - \Delta_0}{s_p\sqrt{\frac{1}{n_1} + \frac{1}{n_2}}}; s_p^2 = \frac{(n_1 - 1)s_1^2 + (n_2 - 1)s_2^2}{n_1 + n_2 - 2}$$

$$Test\ Statistic, T_0 = \frac{\bar{x}_1 - \bar{x}_2 - \Delta_0}{\sqrt{\frac{s_1^2}{n_1} + \frac{s_2^2}{n_2}}}; v = \frac{\left(\frac{s_1^2}{n_1} + \frac{s_2^2}{n_2}\right)^2}{\frac{\left(s_1^2/n_1\right)^2}{n_1 - 1} + \frac{\left(s_2^2/n_2\right)^2}{n_2 - 1}}$$

$$Test\ Statistic, F_0 = \frac{s_1^2}{s_2^2}\ ;\ Degree\ of\ Freedom =\ F_{(n_1-1, n_2-1)}$$

$$Test\ Statistic, t = \frac{\overline{D} - \mu_D}{\frac{S_D}{\sqrt{n}}}\ ;\ Degree\ of\ Freedom =\ n-1$$

$$\overline{D} = \frac{\sum D}{n}\ ;\ S_D = \sqrt{\frac{\sum D^2 - \frac{(\sum D^2)}{n}}{n-1}}$$

(c) Chi-Square Test

$$Test\ Statistic, \chi^2 = \sum_i^n \frac{(o_i - e_i)^2}{e_i}$$

$$Degree\ of\ Freedom\ for\ one-way\ contigency\ table = k-1$$

$$Test\ Statistic, \chi^2 = \sum_i^n \frac{\left(o_{ij} - e_{ij}\right)^2}{e_{ij}},\ e_{ij} = \frac{(i^{th} Row\ total)(j^{th} Column\ total)}{Total\ sample\ size}$$

$$Degree\ of\ Freedom\ for\ two-way\ contigency\ table = (r-1)(c-1)$$

(d) Correlation

$$Pearson\ Correlation\ Coefficient, \qquad r = \frac{\sum xy - \frac{(\sum x \sum y)}{n}}{\sqrt{\left(\sum x^2 - \frac{(\sum x)^2}{n}\right)\left(\sum y^2 - \frac{(\sum y)^2}{n}\right)}}$$

$$Spearman\ Correlation\ Coefficient, \qquad r_s = 1 - \frac{6\sum d_i^2}{n(n^2-1)}\ where\ d_i = y_i - x_i$$

$$Test\ Statistic, t = \frac{r}{\sqrt{\frac{1-r^2}{n-2}}}$$

(e) Regression

$$b_1 = \frac{\sum xy - \frac{(\sum x \sum y)}{n}}{\sum x^2 - \frac{(\sum x)^2}{n}} \; ; \; b_0 = \bar{y} - b_1\bar{x}$$

$$Test\ Statistic, t = \frac{b_1 - \beta_1}{S_{b_1}} \; ; \; Degree\ of\ Freedom = n - 2$$

(f) Analysis of variance (ANOVA)

$$Test\ Statistic, F = \frac{ns^{\frac{2}{x}}}{s_p^2}$$

- numerator degrees of freedom = $k - 1$
- denominator degrees of freedom = $k\ (n - 1)$
